Fabricated stainless steel balustrade system

Stronghold is a quality balustrade and handrail system which is designed for the application where the more “component based” systems would feature too many visible joints.

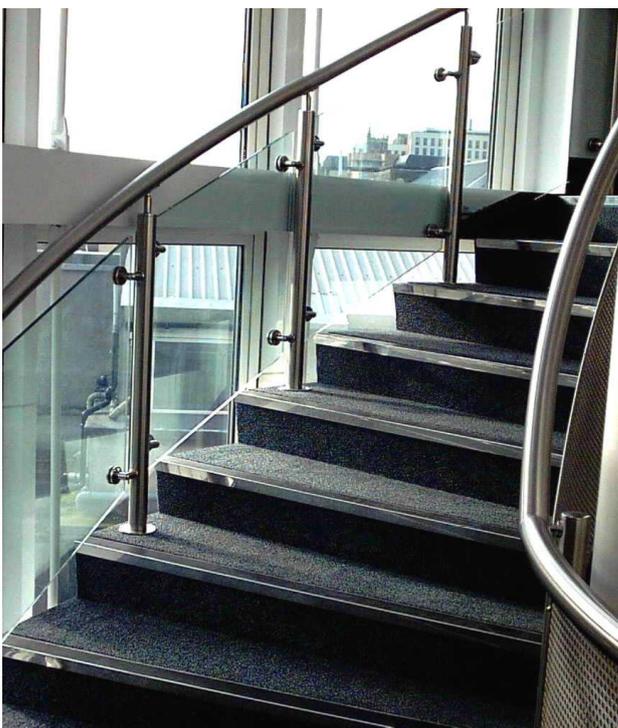

Stronghold is not restricted by having to incorporate standard components.

Stainless steel is grade 304 for internal applications or 316 which is suitable for exterior applications.

Handrail is either 42 mm or 48 mm diameter, and all “changes in direction” of the handrail are welded, dressed, ground smooth and then finally polished with either a bright or satin finish. We aim to have only one visible joint per flight of stairs.

Balusters can be round, flat, rectangular or square.

Various infills are available: Glass, perforated sheet, mesh, wire or “running rails.”
